Nanobase Global Consortium (“NGC”) Communication is a technology innovation and communication infrastructure developer. It has proven track records in planning, architecting, deploying and operating telecom (land and wireless including 3G, LTE, and GSM), bandwidth distribution, and high-speed Internet Access Infrastructures.

NGC also offers extensive experience in designing, developing, and deploying communication and multi-purpose satellites utilized in telecom, internet, and TV.

Additionally, NGC has experience with the major satellite launch service providers and interface design. NGC successfully deployed:

- Reliable and Scalable Telecom Infrastructure
- Highly efficient data centers and internet access points
- Cost effective bandwidth distribution
- Communication Satellites
- Satellite Integration and Launch Vehicle Interface Development
